1.0 INTRODUCTION

The CDM - AECOM Multimedia Joint Venture (JV) was contracted by the Naval Facilities Engineering Command, Mid-Atlantic (NAVFAC Mid-Lant) to provide reporting services for the heating oil underground storage tanks (USTs) located in Laurel Bay Military Housing (LBMH) area at the Marine Corps Air Station (MCAS) Beaufort, South Carolina (Site). This work has been awarded under Contract Task Order (CTO) WE52 of the Indefinite Delivery, Indefinite Quantity (IDIQ) Multimedia Environmental Compliance Contract (Contract No. N62470-14-D-9016).

As of January 2014, the LBMH addresses were re-numbered to comply with the E-911 emergency response addressing system; however, in order to remain consistent with historical sampling and reporting for LBMH area, the residences will continue to be referenced with their original address numbers in sample nomenclature and reporting documents.

This report summarizes the results the environmental investigation activities associated with the storage of home heating oil and the potential release of petroleum constituents at the referenced property. Based on the results of the investigation, a No Further Action (NFA) determination has been made by the South Carolina Department of Health and Environmental Control (SCDHEC) for 175 Bay Circle (Formerly 2 Bay Circle). This NFA determination indicates that there are no unacceptable risks to human health or the environment for the petroleum constituents associated with the home heating oil USTs. The following information is included in this report:

- Background information;
- Sampling activities and results; and
- A determination of the property status.

1.1 Background Information

The LBMH area is located approximately 3.5 miles west of MCAS Beaufort. The area is approximately 970 acres in size and serves as an enlisted and officer family housing area. The area is configured with single family and duplex residential structures, and includes recreation, open space, and community facilities. The community includes approximately 1,300 housing units, including legacy Capehart style homes and newer duplex style homes. The housing area

is bordered on the west by salt marshes and the Broad River, and to the north, east and south by uplands. Forested areas lie along the northern and northeastern borders.

Capehart style homes within the LBMH area were formerly heated using heating oil stored in USTs at each residence. There were 1,100 Capehart style housing units in the LBMH area. The newer duplex homes within the LBMH area never utilized heating oil tanks. Heating oil has not been used at Laurel Bay since the mid-1980s. As was the accepted practice at the time, USTs were drained, filled with dirt, capped, and left in place when they were removed from service. Residential USTs are not regulated in the State of South Carolina (i.e., there are no federal or state laws governing installation, management, or removal).

In 2007, MCAS Beaufort began a voluntary program to remove the unregulated, residential USTs and conduct sampling activities to determine if, and to what extent, petroleum constituents may have impacted the surrounding environment. MCAS Beaufort coordinated with SCDHEC to develop removal procedures that were consistent with procedural requirements for regulated USTs. All tank removal activities and follow-on actions are conducted in coordination with SCDHEC. To date, all known USTs have been removed from all residential properties within the LBMH area.

The LBMH UST removal and assessment process is described below in Section 1.2. The LBMH multi-media investigation selection process tree, used to evaluate the environmental impact of USTs for most sites at LBMH, is presented in Appendix A. It should be noted that because the USTs were removed prior to 2007, the subject property of this report did not follow the typical multi-media investigation selection process presented in Appendix A.

1.2 UST Removal and Assessment Process

As stated above, the assessment process at this property did not follow the typical process presented in Appendix A.

During the UST removal process, soil samples were collected from beneath the UST excavations (approximately 4 to 6 feet [ft] below ground surface [bgs]) and analyzed for a predetermined list of constituents of potential concern (COPCs) associated with the petroleum compounds found in home heating oil. These COPCs, derived from the *Quality Assurance Program Plan (QAPP) for the Underground Storage Tank Management Division, Revision 3.1* (SCDHEC, 2016) and the *Underground Storage Tank Assessment Instructions for Permanent Closure and Change-In-Service*, (SCDHEC, 2018), are as follows:

- benzene, toluene, ethylbenzene, and xylenes (BTEX),
- naphthalene, and
- five select polynuclear aromatic hydrocarbon (PAHs): benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and dibenz(a,h)anthracene.

Soil sample results were submitted by MCAS Beaufort to SCDHEC utilizing SCDHEC's UST Assessment Report form. In accordance with SCDHEC's *QAPP for the UST Management Division* (SCDHEC, 2016), the soil screening levels consists of SCDHEC risk-based screening levels (RBSLs). It should be noted that the RBSLs for select PAHs were revised in Revision 2.0 of the QAPP (SCDHEC, 2013) and were revised again in Revision 3.0 (SCDHEC, 2015). The screening levels used for evaluation at each site were those levels that were in effect at the time of reporting and review by SCDHEC.

The results of the soil sampling at each former UST location were used to determine whether further investigation was required (i.e., soil results greater than RBSLs) and subsequently to select properties for follow-up soil and initial groundwater assessment (IGWA) sampling. The results of the IGWA sampling (if necessary) are used to determine the presence or absence of the aforementioned COPCs in groundwater and identify whether former UST locations will require additional delineation of COPCs in groundwater. A sampling program is established for those former UST locations where IGWA sampling has indicated the presence of COPCs in excess of the SCDHEC RBSLs for groundwater. Groundwater analytical results are also compared to the site specific groundwater vapor intrusion screening levels (VISLs) to evaluate the potential for vapor intrusion and the necessity for an investigation associated with this media.

2.0 SAMPLING ACTIVITIES AND RESULTS

The following section presents the sampling activities and associated results for 175 Bay Circle (Formerly 2 Bay Circle). Details regarding the soil investigation at this site are provided in the *SCDHEC UST Assessment Report – Houses #2, #3, #4, #5, #6 Bay Circle* (MCAS Beaufort, 2003). The UST Assessment Report is provided in Appendix B. Details regarding the additional soil and IGWA sampling activities at this site are provided in the *Completion Report Modified Initial Groundwater Assessment for Housing Unit 2 MCAS Beaufort SC* (ADVENT Environmental Inc, 2004). The laboratory reports that include the pertinent soil and IGWA analytical results for this site are presented in Appendices C and D, respectively.

2.1 UST Removal and Soil Sampling

On October 2, 2003, a single 280 gallon heating oil UST was removed from 175 Bay Circle (Formerly 2 Bay Circle). The former UST location is indicated on the sketch included in the UST Assessment Report (Appendix B). The UST was removed and properly disposed of (i.e., shipped offsite for recycling or transported to a landfill). Visual evidence (i.e., staining or sheen) of petroleum impact was recorded at the time of the UST removal. According to the UST Assessment Report (Appendix B), the depth to the base of the UST was 6'0" bgs and soil samples were collected at 7'0" bgs. The samples were collected from below the bottom of the tank basin and underneath the dispenser islands locations of the former UST to represent a worst case scenario.

Following UST removal, soil samples were collected and shipped to an offsite laboratory for analysis of the petroleum COPCs. Sampling was performed in accordance with applicable South Carolina regulation R.61-92, Part 280 (SCDHEC, 2017) and assessment guidelines.

2.2 UST Removal Soil Analytical Results

A summary of the laboratory analytical results and SCDHEC RBSLs is presented in Table 1. A copy of the laboratory analytical data report is included in the UST Assessment Report presented in Appendix B. The laboratory analytical data report includes the soil results for the additional PAHs that were analyzed, but do not have associated RBSLs.

The soil sample results were submitted by MCAS Beaufort to SCDHEC utilizing SCDHEC's UST Assessment Report form (Appendix B). The results of the soil sampling at the former UST location were used by MCAS Beaufort, in consultation with SCDHEC, to determine a path forward (i.e., additional sampling or NFA) for the property. The soil results collected from 175 Bay Circle (Formerly 2 Bay Circle) were greater than the SCDHEC RBSLs, which indicated further investigation was required. In a letter dated January 5, 2004, SCDHEC requested an IGWA for 175 Bay Circle (Formerly 2 Bay Circle) to determine if the groundwater was impacted by petroleum COPCs. SCDHEC's request letter is provided in Appendix E.

2.3 Additional Soil Sampling

On February 24, 2004, a single soil boring was advanced at 175 Bay Circle (Formerly 2 Bay Circle). The soil boring was placed in the same general location as the former heating oil UST. The former UST location is indicated on the figures of the UST Assessment Report (Appendix

B). The soil boring was collocated with the temporary monitoring well discussed in Section 2.5. A single soil sample was collected from the soil boring and shipped to an offsite laboratory for analysis of the petroleum COPCs. Further details are provided in the *Completion Report Modified Initial Groundwater Assessment for Housing Unit 2 MCAS Beaufort SC* (ADVENT Environmental Inc, 2004).

2.4 Additional Soil Analytical Results

A summary of the laboratory analytical results and SCDHEC RBSLs is presented in Table 2. A copy of the laboratory analytical data reports are included as Appendix C.

The soil results collected from 175 Bay Circle (Formerly 2 Bay Circle) were less than the SCDHEC RBSLs (Table 2), which indicated that the soil was not impacted by COPCs associated with the former UST at concentrations that present a potential risk to human health and the environment.

2.5 Groundwater Sampling

On February 24, 2004, the soil boring was converted into a temporary monitoring well at 175 Bay Circle (Formerly 2 Bay Circle), in accordance with the South Carolina Well Standards and Regulations (R.61-71.H-I, updated June 24, 2016). Further details are provided in the *Completion Report Modified Initial Groundwater Assessment for Housing Unit 2 MCAS Beaufort SC* (ADVENT Environmental Inc, 2004).

The sampling strategy for this phase of the investigation required a one-time sampling event of the temporarily installed monitoring well. Following well installation and development, groundwater samples were collected using low-flow methods and shipped to an offsite laboratory for analysis of the petroleum COPCs. Upon completion of groundwater sampling, the temporary well was abandoned in accordance with the South Carolina Well Standards and Regulations R.61-71 (SCDHEC, May 2016). Field forms are provided in the *Completion Report Modified Initial Groundwater Assessment for Housing Unit 2 MCAS Beaufort SC* (ADVENT Environmental Inc, 2004).

2.6 Groundwater Analytical Results

A summary of the laboratory analytical results and SCDHEC RBSLs is presented in Table 3. A copy of the laboratory analytical data report is included in Appendix D.

The groundwater results collected from 175 Bay Circle (Formerly 2 Bay Circle) were less than the SCDHEC RBSLs and the site specific groundwater VISLs (Table 3), which indicated that the groundwater was not impacted by COPCs associated with the former UST at concentrations that present a potential risk to human health and the environment.

3.0 PROPERTY STATUS

Based on the analytical results for groundwater, SCDHEC made the determination that NFA was required for 175 Bay Circle (Formerly 2 Bay Circle). This NFA determination was obtained in a letter dated May 21, 2004. SCDHEC's NFA letter is provided in Appendix E.

Notes:

⁽¹⁾ South Carolina Risk-Based Screening Levels from the Quality Assurance Program Plan for the Underground Storage Tank Management Division, Revision 3.1 (SCDHEC, February 2016).

⁽²⁾ Site-specific groundwater VISLs were calculated using the EPA JE Model Spreadsheets (Version 3.1, February 2004) and conservative modeling inputs representative of a small single-story house with an 8 foot ceiling. Site-specific groundwater VISLs were developed based on a target risk level of 1×10^{-6} , a target hazard quotient of 1 (per target organ), and a default residential exposure scenario, assuming exposure for 24 hours/day, 350 days/year, for 26 years. Modeling was performed for a range of depths to groundwater for application as appropriate in different areas of the Laurel Bay Military Housing Area. The most conservative levels are presented for comparison. Refer to Appendix H of the Uniform Federal Policy Sampling Analysis and Sampling Plan for Vapor Media, Revision 4 (Resolution Consultants, April 2017) for additional information.

Bold font indicates the analyte was detected.

Bold font and shading indicates the concentration exceeds the SCDHEC RBSL and/or the Site-Specific Groundwater VISL.

Re: UST Closure Report
MCAS – Laurel Bay Housing Complex, Beaufort, SC
Houses #2, #3, #4, #5, #6 Bay Circle
Site Id #

Dear Sir or Maam:

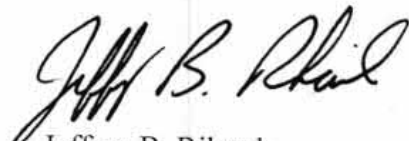

Please find attached the UST Closure Report for the above mentioned site. This report summarizes our UST closure activities and presents the conclusions.

Since these un-regulated USTs are now removed and the samples elicited only a trace of petroleum hydrocarbon contamination present, we recommend no further action on this site.

Should you have any questions regarding this report, please do not hesitate to call us at (803) 532-4710.

Sincerely,

Rikard Enterprises, LLC.

Jeffrey B. Rikard

XI. RECEPTORS

		YES	NO
A.	<p>Are there any lakes, ponds, streams, or wetlands located within 1,000 feet Of the UST system?</p> <p>If yes, indicate type of receptor, distance, and direction on the site map. Right on the river.</p>	X	
B.	<p>Are there any public, private, or irrigation water supply wells within 1,000 feet Of the UST system?</p> <p>If yes, indicate type of well, distance, and direction on the site map.</p>		X
C.	<p>Are there any underground structures (e.g., basements) located within 100 feet of the UST system?</p> <p>If yes, indicate type of structures, distance, and direction on the site map.</p>		X
D.	<p>Are there any underground utilities (e.g., telephone, electricity, gas, water, Sewer, storm drain) located within 100 feet of the UST system that could Potentially come in contact with the contamination?</p> <p>If yes, indicate the type of utility, distance, and direction on the site map.</p>		X
E.	<p>Has contaminated soil been identified at a depth less than 3 feet below land surface in an area that is not capped by asphalt or concrete?</p> <p>If yes, indicate the area of contaminated soil on the site map.</p>		X

NOTES

- UST SIZE - APPROXIMATELY 200 GALLONS EACH
- UST AGE - UNKNOWN UST CONTENTS - HEATING OIL
- PIPE RUNS < 5 FEET
- TANKS AND PIPING REMOVED FROM THE GROUND FOR PROPER DISPOSAL
- SAMPLES COLLECTED AT THE BOTTOM OF THE TANK EXCAVATION ON EACH END OF THE TANK
- GPS ACCURACY WITHIN 6 FEET

MEMORANDUM

TO: Mike Paclik, Actus Lend Lease, LLC
 FROM: William S. Anderson, III, PE
 DATE: December 2, 2003
 RE: Soil Sampling

Summarized below are the results of WPC's soil sampling of the underground storage tank (UST) excavation pits after additional soil was removed.

Four soil samples and one water sample were collected from within the UST excavations for Tank locations 4, 5, and 6. Six soil samples were collected from within the UST excavation for Tank location 3. The wall samples were collected from approximately one foot above the bottom of the excavation and the bottom samples were collected from the north and south end of the excavation. The water sample was collected from the water in the excavation. The soil samples were placed in a resealable plastic bags and allowed to volatilize. The headspace of each soil sample was field screened for volatile organics using a Photoionization Detector (PID). The PID readings ranged from zero to 78.1 parts per million (ppm). Table 1 below summarizes the sample locations and PID readings.

Table 1. Summary of Soil Sampling

Area	Sample ID	PID Reading
3	T3-1, Bottom South	1.7
	T3-2, Bottom North	4.6
	T3-E, East Wall	0.0
	T3-W, West Wall	0.0
	T3-S, South Wall	0.0
	T3-N, North Wall	1.7
4	T-4, Groundwater	NA
	T4-E, East Wall	5.0
	T4-W, West Wall	18.5
	T4-S, South Wall	59.3
	T4-N, North Wall	2.0
5	T-5, Groundwater	NA
	T5-E, East Wall	16.5
	T5-W, West Wall	64.3
	T5-S, South Wall	2.0
	T5-N, North Wall	64.0
6	T-6, Groundwater	NA
	T6-E, East Wall	44.2
	T6-W, West Wall	78.1
	T6-S, South Wall	0.0
	T6-N, North Wall	33.6

The soil and groundwater samples from the excavations were sent off for laboratory testing. The samples were placed into laboratory-supplied sample containers, labeled, logged on a chain-of-custody form, and packed on ice in an insulated cooler. The samples were shipped under strict quality assurance / quality control protocol via overnight delivery service to Environmental Science Corp. in Mt. Juliet, TN for analysis. The laboratory test results are attached.

	Indeno(1,2,3-cd)pyrene	J4
	Accnaphthylene	J4
	Benzo(g,h,i)perylene	J4
L136084-20	Dibenz(a,h)anthracene	J4
	Indeno(1,2,3-cd)pyrene	J4
	Acenaphthylene	J4
	Benzo(g,h,i)perylene	J4
L136084-21	Dibenz(a,h)anthracene	J4
	Indeno(1,2,3-cd)pyrene	J4
	Acenaphthylene	J4
	Benzo(g,h,i)perylene	J4

Attachment B
Explanation of QC Qualifier Codes

Qualifier	Meaning
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits
J4	The associated batch QC was outside the established quality control range for accuracy.
0	(ESC) Sample diluted due to matrix interferences that impaired the ability to make an accurate analytical determination. The detection limit is elevated in order to reflect the necessary dilution.

Qualifier Report Information

ESC utilizes sample and result qualifiers as set forth by the EPA Contract Laboratory Program and as required by most certifying bodies including NELAP. In addition to the EPA qualifiers adopted by ESC, we have implemented ESC qualifiers to provide more information pertaining to our analytical results. Each qualifier is designated in the qualifier explanation as either EPA or ESC. Data qualifiers are intended to provide the ESC client with more detailed information concerning the potential bias of reported data. Because of the wide range of constituents and variety of matrices incorporated by most EPA methods, it is common for some compounds to fall outside of established ranges. These exceptions are evaluated and all reported data is valid and useable unless qualified as 'R' (Rejected).

Definitions

Accuracy - The relationship of the observed value of a known sample to the true value of a known sample. Represented by percent recovery and relevant to samples such as: control samples, matrix spike recoveries, surrogate recoveries, etc.

Precision - The agreement between a set of samples or between duplicate samples. Relates to how close together the results are and is represented by Relative Percent Difference.

Surrogate - Organic compounds that are similar in chemical composition, extraction, and chromatography to analytes of interest. The surrogates are used to determine the probable response of the group of analytes that are chemically related to the surrogate compound. Surrogates are added to the sample and carried through all stages of preparation and analyses.

Control Limits

2-Fluorophenol	31-119	Nitrobenzene-d5	43-118	Dibromofluoromethane	79-126	83-119
Phenol-d5	12-134	2-Fluorobiphenyl	45-128	Toluene-d8	81-114	82-116
2,4,6-Tribromophenol	51-141	Terphenyl-d14	43-137	4-Bromofluorobenzene	65-129	72-126

TIC Tentatively Identified Compound: Compounds detected in samples that are not target compounds, internal standards, system monitoring compounds, or surrogates.

THE CAT SCALE GUARANTEE. The CAT Scale Company guarantees that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

WEIGH WHAT WE SAY OR WE PAY

If you get an overweight fine from the state AFTER one of our CAT Scales showed a legal weight, we will immediately check our scale and we will:

- (1) Reimburse you for the cost of the overweight fine if our scale is wrong, OR
(2) A representative of CAT Scale Company will appear in court WITH the driver as an expert witness if we believe our scale was correct.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale's Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

The four weights shown below are separate weights. The GROSS WEIGHT is the CERTIFIED WEIGHT and was weighed on a full length platform scale.

THANK YOU FOR WEIGHING ON CAT SCALE!

THE CAT SCALE GUARANTEE The CAT Scale Company guarantees that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

"WEIGH WHAT WE SAY OR WE PAY" If you get an overweight fine from the state AFTER one of our CAT Scales showed a legal weight, we will immediately check our scale and we will:

- (1) Reimburse you for the cost of the overweight fine if our scale is wrong, OR
(2) A representative of CAT Scale Company will appear in court WITH the driver as an expert witness if we believe our scale was correct.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free). IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

Re: MCAS – Laurel Bay Housing – Laurel Bay Circle House #'s 2,3,4,5,and 6
Site ID # 02514
UST Closure Reports received 19 December 2003
Beaufort County

Dear Ms. Howard:

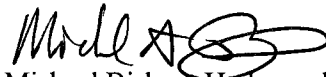

The Department has completed technical review of the referenced document. Interpretation of the analytical data provided in the referenced report indicates that chemicals of concern (CoC) remain above established Risk-Based Screening Levels for soils.

Assessment and remediation activities in the vicinity of houses 3, 4, 5, and 6 indicate that Naphthalene remains in soils in excess of established RBSL limits. However, groundwater sampling conducted in these areas indicates that the remaining hydrocarbon contamination in soil does not present a continuing threat to groundwater quality, human health, or the environment. In addition, residual contamination in soils does not exceed exposure limits for ingestion or dermal contact. Therefore, no additional assessment or remedial measures are required for housing units 3-6.

Assessment activities conducted during October 2003 in the vicinity of housing unit #2 indicated levels of Benzene and PAHs in excess of established RBSL limits. The submitted closure report did not contain any groundwater sampling data related to housing unit #2. In order for the Department to fully evaluate the risk posed by the contaminated soil, a groundwater sample must be collected. Further assessment and/or remedial actions are necessary at housing unit #2.

Please submit the require groundwater sample no later than 31 March 2004. Should you have any questions, please contact me at 803-898-3553 (office phone), 803-898-2893 (fax) or bishopma@dhec.sc.gov.

Sincerely,

Michael Bishop, Hydrogeologist

Re: MCAS – Laurel Bay Housing – Laurel Bay Circle House #'s 2,3,4,5, and 6
Site ID # 02514
IGWA Report received 20 May 2004
No Further Action
Beaufort County

Dear Ms. Howard:

The Department has reviewed the referenced report. As submitted, the report documents soil and groundwater assessment activities conducted to determine the extent and severity of the petroleum contamination at the referenced site. Based on this review, it appears that maximum contaminant levels are not exceeded in soil or groundwater at the site.

Based on the information and analytical data submitted, the Department recognizes that the Marine Corps Air Station has adequately addressed the known environmental contamination identified on the property to date in accordance with the approved scope of work. Consequently, no further investigation is required at this time. Please note, this statement pertains only to the portion of the site addressed in the referenced report and does not apply to other areas of the site and/or any other potential regulatory violations. Furthermore, the Department retains the right to request further investigation if deemed necessary.

Should you have any questions, please contact me at 803-898-3553 (office phone), 803-898-2893 (fax) or bishopma@dhec.sc.gov.

Sincerely,

Michael Bishop, Hydrogeologist
